DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of group II, species E in Paper No. 8 is acknowledged.

Drawings

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: '320', '220a', '252a', '601'. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.
3. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(4) because reference character "3502" has been used to designate both visible indicia and support surface. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

4. The disclosure is objected to because of the following informalities: page 16, line 24, "43" should be--34--.

Appropriate correction is required.

5. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is

Art Unit: 3724

requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claims 6-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 6, it is not clear what structure is set forth by "said blade sharpening assembly (2900) is self adjusting".

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

9. Claims 5-6 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Tweed et al. (US 5,591,072)

Regarding claim 5, Tweed discloses all the recited elements of the invention including a rotatable blade having a sharp edge (102), a blade sharpening assembly (12) having at least one sharpening stone (38) and a retractable shield (80).

Regarding claims 6 and 8, Tweed discloses all the recited elements of the invention including a rotatable blade having a blade edge (102), a blade sharpening

Art Unit: 3724

assembly (12) having a sharpening stone (38) and a retractable shield (80), a spring (52), a guide (a cylindrical end piece of 50), and an actuator (50).

It is noted that a motor for operating the blade is necessarily present in the device of Tweed.

Claim Rejections - 35 USC § 103

10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

11. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tweed et al. (US 5,591,072) in view of GB 2,072,785 issued to Csala.

Tweed discloses the invention substantially as claimed except for a position sensor. Csala discloses a position sensor (20) for disconnecting the power to a blade motor when a blade sharpener is not in an operating position. It would have been obvious to one having ordinary skill in the art at the time the invention was made to employ a position sensor as taught by Csala on the device of Tweed to prevent accidental rotation of the blade when the blade sharpener is not in the operating position.

Conclusion

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Berkel, Engi, and Anecki et al. are cited to show related devices.

13. Any inquiry concerning this communication or earlier communications from the
